

Preseason is an important time to prepare your body for the season ahead. It also helps to develop good habits in your team that can develop discipline, team morale and reduce injury rates in the upcoming matches. Probably the most common mistake is people not training for the way they play. This affects both injury rates and performance.

One of the keys to training is to ready the body for the speed and forces that it will be subject to in a match. Like all the programs in different sports, focus on technique over volume. The following program provides a framework for improving strength, power and coordination.

The FIFA 11 was the first well known program of its kind and developed into the 11+. It should take around 15-20 minutes once practiced and should be completed at least twice a week (including during the season) for optimal benefits. Focus on quality of movement and technique.

For warm up only complete parts 1 and 3.
